

ARC-1272WAW Brush Wall Plate – White

ARC-1272BAU Brush Wall Plate – Black

---

This single gang blank wall plate allows cables to enter the wall cavity space without the need to inter-connect wall plates in between. Ideal for pre-made leads directly out of the wall cavity, with the brush you can keep the dust away.

Use behind TVs and other AV equipment to avoid unnecessary connections and terminations. Every connection adds a potential risk to the integrity of the signal passing through, so avoid the use of expensive AV faceplates and simply take your cable right through the wall and straight to its destination. The aperture is large enough for VGA plugs, HDMI plugs etc.
